

Achieving compliance and securing sensitive data on mobile devices

Gardner Leader, like most law firms, are heavily reliant on mobile devices to efficiently run their business. While staff were on the move, the company needed to ensure that their sensitive client data was protected from breach and that their connections to public WiFi networks could not be compromised.

Why is Mobile Threat Defence important to the business?

“To maintain the highest of industry standards, while protecting the best interests of their client, Gardner Leader have to make sure that everything they do complies with SRA standards. Keeping all devices that have access to confidential client data secure is fundamentally important to the business.”

What solution did SolCo put in place?

“Our industry leading product, Trustd, provides complete peace of mind and compliance where corporate mobile data protection is concerned, while providing privacy for users – keeping their messages, photos, calls, contacts etc entirely private on personal devices.”

How does this help Gardner Leader?

“Providing peace of mind for the security of sensitive information – achieving compliance obligations and Cyber Essentials Plus certification, while not disrupting the firm’s ability to work in a flexible and agile way, permits Gardner Leader the protections that they deserve as a long-established reputable law firm.”

Gardner Leader is a law firm that has been at the heart of the Berkshire community for over 120 years, with offices in Newbury, Thatcham, Maidenhead, Swindon, London and Windsor.

“Following a referral to SolCo, we have utilised their services to assist us in the supply, installation, configuration and roll-out of our cloud based telephony system, as well as the adoption of the TrustD mobile security app to assist us with achieving Cyber Essentials accreditation. We have found SolCo to be helpful, friendly and easy to deal with and they have become a trusted partner to Gardner Leader LLP”
